NORTH STREET DENTAL CARE

36 North Street, Hailsham, 01323 - 840 333

www.u2smile.com

I WANT TO HAVE A WHITE BRIGHT SMILE! BUT HOW?

North Street Dental Care has now introduced the revolutionary **Laser Tooth whitening**. Laser Whitening is a very painless procedure and this will lighten the color of your natural teeth. For many patients this treatment can make their overall dental appearance far more attractive, giving a brighter smile.

Some teeth are naturally too pigmented, or stained, as they develop. Exposure to coffee, tea, juices, red wine or tobacco accounts for much of the darkening as we age. We can lighten your teeth up to eight shades in less than 30 minutes.

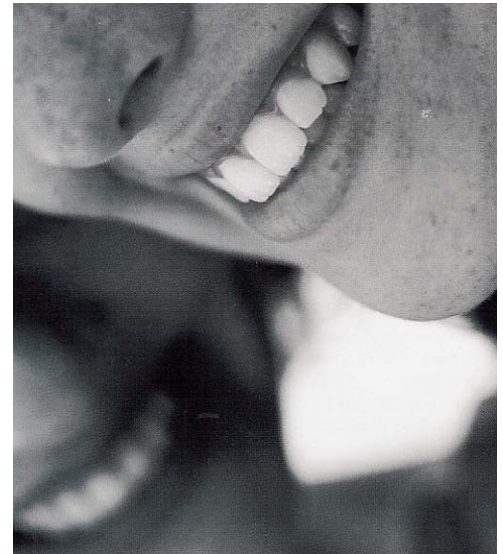

Dr. P. Hanna specializing at DGH

In our previous newsletter we mentioned that Dr. P. Hanna is specializing in Oral Surgery. He will now start to specialize fulltime in oral surgery and will maybe do some part time general/surgical dentistry at North Street Dental Care.

We are fortunate to announce that the experienced and ambitious **Dr. Kostas** will replace him from middle of June 2004. **Dr. Kostas** has many years of experience in general private dentistry and is specializing in cosmetic dentistry. **Dr. Kostas** is a member of cosmetic dental association.

Dr. Kostas has worked in Pediatric clinic (care for children and adolescents) and will be a great asset for North Street Dental Care.

We at North Street Dental Care wish Dr. Hanna a prosperous four years and the patients registered under his name will be transferred and treated by **Dr. Kostas**.

Practice policy...

Please try and give us at least 24 hours notice if you are unable to attend, so that others in pain may be offered your appointment. We regret that a fee may be charged if booked surgery time is wasted through lack of notice.

The future is bright...

North street Dental Care is among a very few practices in the area accepting new patients. Private and NHS patients are welcome but please remember that your registration will lapse if you don't have regular check ups. The department of health and your dentist recommends that you have six monthly examinations. If you haven't had a check up for over a year you have probably been deregistered from our list, but in order to reregister, you will need to contact us at **01323 840333** and we will book you for a dental examination.

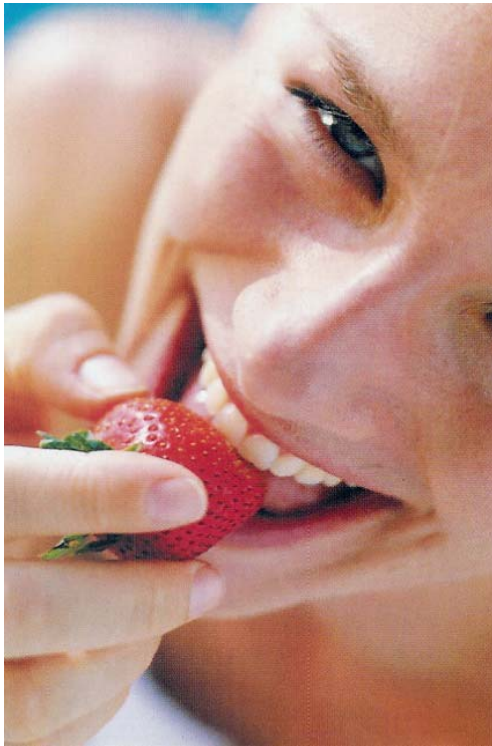

Cosmetic Laser dentistry, anything for me?

North Street Dental Care offers now revolutionary laser treatment, the second dental laser in the country (of this type), a good choice to help U 2 Smile. This laser offers a modern technology that is equipped with the **latest state of the art system** and offers the most advanced cosmetic dentistry, a new approach to dentistry into 21st century.

There is no doubt that nowadays more and more people are turning to their dentist for assistance in improving their appearance. Dentistry is no longer perceived as a service to simply fill or extract teeth, but is recognized as providing us with the ability to improve our smiles through the provision of cosmetic dentistry such as cosmetic fillings, veneers, crowns and implants.

Are you happy with the appearance of your smile? Do you often feel that you would like to be able to change some aspect of your smile? If the answer to either of these questions is in the affirmative then cosmetic dentistry could be the answer for you.

To find out more about the individual cosmetic options available, arrange an appointment with your dentist who will be happy to discuss your individual treatment needs.

No tears, only smile with the Dental LASER...Let us help you to smile

Dr M. Pourani is the principal dentist at NSDC with years of experience in cosmetic dentistry and is specializing in prosthodontics (cosmetic restoration, crown, bridge, veneers and dentures) and dental phobia.

Dr. M. Pourani has specialized in **LASER dentistry** and is using laser technology for his patient at North Street Dental Care. Laser dentistry is the most exciting area of dentistry today. We can treat a wide variety of conditions in new and improved ways that eliminate the use of the dental drill and needle such as fillings.

Laser treatment is a safe and painless way of having dental treatment today. Our philosophy at NSDC is that all dental treatment must be performed using the most advanced techniques and materials, with the least possible discomfort and postoperative complication for the patient, and of course the best possible outcome. With the revolutionary laser treatment we will lead you into 21st century dentistry.

Why white fillings?

Many people have fillings in their mouths; these often tend to be silver or metal fillings, known as amalgam fillings (mercury containing fillings), especially towards the rear of the mouth. Nowadays it is possible to have white or tooth colored fillings placed instead, and these are known as ceramic fillings. A ceramic filling is more natural looking than an amalgam filling, and many people would prefer to have them in order that they are not displaying metal fillings when they laugh or smile. Most European countries have stopped using amalgam as a filling material because of concerns about the safety of the mercury and its side effects such as allergy and tiredness. At North Street Dental Care we offer Laser white fillings.
